

Thank you for the purchase of your New Green Machine GAS LSV Cart. You should expect years and years of reliable use from it. There are several important things that you will need to do to help make this happen.

Break In:

The break-in period is a very important time with any new vehicle. The typical break-in period happens within the first 200 miles. During this time your vehicle will get smoother, increase power, allow for smoother turning and get quieter.

Here are a few of the items that you will need to do to help extend the life of this vehicle.

- The manufacturer has lubricated the engine with a special blend of oil to help with this process, with this blend it will dissipate quickly. During this period you **WILL NEED TO CHECK AND ADD OIL AT 50 miles**, again at every 50 mile interval until fully broken in at 350 miles. May only take a small amount (1/4 to 1/2 qt) each time but it is essential that you keep it full. **DO NOT OVERFILL**. Please see owners manual for details on checking and adding oil. Recommended oil is **15w/40**.
- The manufacturer has also added a special blend of break-in fuel to the fuel system. This is a strong oil based fuel, with that said you need to add Premium fuel for first fill up. It may take the first full tank run through the system to fully flush out the factory blended fuel. During this time the vehicle can be harder to start and limit the performance. Please be patient as this will clean out during the first tank use.
- During the break-in period it is very **IMPORTANT TO NOT RUN VEHICLE AT HIGH RPM'S (ABOVE 6000) FOR AN EXTENDED TIME**. Do not run Vehicle at full throttle for longer than 30 seconds at a time.
- We have installed a speed regulator system to help maintain a safe top speed. This adjust may limit the hill climbing power as it allows only a partial amount of the throttle to be engaged. After break in period you can adjust this setting by adjusting the bolt under the gas pedal. Again do. Not over rev engine during or after break in period.
- You may also notice during this time some bolts or nuts may loosen up as the vehicle settles with use. Please tighten anything to spec per manual if needed.
- Check lug nuts at every 50 miles of use for the safety of all passengers.

Reminder that you MUST go to www.greenmachinecarts.com/warranty-registration within 15 days of purchase to register for warranty. Failure to do so will void warranty enrollment.

After break in period you should still follow the break in suggestions during normal use and follow the manufacturers owners manual directions.

Please check with our website for valuable videos on some key features of this unit.
